

TECHNICAL DATA SHEET

ICE KAL HW

CLEANER, DESCALER FOR ICE MAKER MAINTENANCE

Liquid cleaner designed for ice machines to effectively remove limescale, dirt, mould and mineral deposits from the ice machine.

This powerful detergent, suitable for all types of ice machines, ensures that the machine operates at peak performance, producing clean, clear ice every time.

Regular use helps prevent the build-up of mineral deposits and bacteria to maintain efficiency and hygiene.

CHARACTERISTICS

Acid-based cleaner containing corrosion inhibitors that effectively prevent the solution from attacking contact surfaces. The formula contains sequestrants, increasing its efficiency even in the presence of hard water.

INSTRUCTION FOR USE

DOSAGE: generally used at a concentration of 20-40% v/v in water, depending on the degree of limescale and the type of residue to be removed.

The duration of the treatment will be significantly reduced if used hot, not exceeding 70°C.

At the end of descaling, rinse thoroughly by circulation or with pressurised water.

PRECAUTIONS

Consult the safety data sheet.
