AL CLEANER

ALKALINE DEGREASER FOR WASHING METAL ITEMS

It is a detergent designed to remove dirt and grease residuals on ferrous and non-ferrous pots and pans made of objects through washing machines.
Suitable for aluminum equipment.

It does not contain free caustic agents, it is easy to rinse and is used by immersion, with a minimum temperature of 35° C.

It has the following advantages:

- In liquid form it is easily dilutable
- Low foaming at the specified conditions
- Can be used on light alloys and copper
- Can be used at low concentrations and temperatures
- It does not contain nitrites, chromates
- Easy to rinse when necessary
- Quickly separates oils and greases prolonging the life of the bath and reducing disposal process

INSTRUCTIONS FOR USE

Using with a concentration of 5 gr/l with temperature from min.35° C depending on the type of dirt to be removed.
To be used with final rinse.

PRECAUTIONS

Refer to the safety data sheet.
